

Unimouse

Perfect fit for all sizes and shapes

Unimouse is the most adjustable one-hand computer mouse on the market. This vertical mouse is designed since every hand is different and there is no one mouse that fits all hands. To avoid repetitive strain injuries and discomfort, it's important that your computer mouse fits for your hand and provides optimal support. You need to have a relaxed grip that doesn't bend your fingers too much, otherwise your hand and wrist can become strained, causing injuries.

With the Unimouse's vertical adjustability and movable thumb support, you can adjust the mouse to fit all hand sizes and change hand positions throughout the day for greater flexibility.

Fully adjustable

The patented articulated hinge makes it possible to adjust the angle of the mouse anywhere from 35 to 70 degrees. The friction-based locking system is stable in every position and the moveable thumb support is adjustable in all directions. This alleviates gripping pain and pressure on the base of the thumb, reducing repetitive strain injuries and allowing you to maintain a relaxed grip on the mouse.

Programmable buttons meet your needs

With six programmable buttons and a comfortable scrolling wheel, you can assign just about any task to any of the buttons to meet your specific needs. Customisation is easy with the free software driver and let define your personal preferences.

Right or left hand – wireless or wired

Whether you are right- or left-handed, require a wireless or wired computer mouse, there is a Unimouse to suit you. Variation is key with Unimouse.

Technical specifications Unimouse

Connectivity	USB wireless or USB wired
Operating system	Windows and OSX
Battery (Wireless)	Built-in Lithium rechargeable
Battery lifetime	3 months
Width	7,6 cm
Depth	11,9 cm
