ShuttlePRO v2

Extend Your Reach. Speed Up Workflow. Fast & Intuitive!

Digital audio editing with ShuttlePRO v2

Digital audio editing has been with us for many years now with a huge range of excellent software programs designed to allow audio professionals to edit and alter music to alter music and sound. However, the traditional mouse and keyboard combination is not the best way to edit music in Windows or on a Mac, lacking subtlety and easy access to commonly used tools and features. ShuttlePRO v2 uses intuitive physical controls for greater speed & precision and allows you to edit your digital audio files using a traditional Jog Shuttle combination. Including an additional 15 programmable buttons to allow you to access commonly needed tools in all popular audio-editing applications, ShuttlePRO v2 might just change the way that you approach your music editing.

It's not just about Music!

– Contour's ShuttlePRO v2 was originally designed and optimised for digital video production, but is capable of running with many types of multimedia applications. Video, music, photo, office applications, surfing the web and even playing games, ShuttlePRO v2 offers a whole new experience to the way you use your computer.

Jim Canter of creativecow.net concluded in his review;

'The ShuttlePRO v2 is habit forming. Use one for a day or two and you'll be hooked. If you're a professional editor working with audio or video, get one. You'll be glad you did!'

Aluminium Jog Dial

– ShuttlePRO v2 features a high quality metal Jog Dial that allows accuracy in your audio timeline scanning. Whether you're looking to trim a clip, or add an important effect marker to your music, the Jog Dial will respond with a comfortable click to help you find your mark. Fully compatible with advanced applications such as Sony Vegas, or even consumer apps such as Apple's GarageBand, timeline accuracy is now possible in your audio projects.

Rubberised Shuttle Wheel

– Attempting to high-speed scan your audio files is a clumsy process when you're relying on a mouse or keyboard. ShuttlePRO v2's spring loaded Shuttle Wheel is rubberised for easy grip and allows multi speed scanning both forwards and backwards along your music timeline. Now it's easy to find the moment you want to edit in all of your tracks, without having to search for your keyboard shortcuts first!

Pre-programmed

– Ease of use is key to ShuttlePRO v2, and to help you easily get started, the supporting software for Mac & Windows includes pre-configured setup for popular audio editing applications such as Adobe Audition, Steinberg Cubase, Ableton Live, Propellerhead Reason, Avid Pro Tools and even includes controlled access to your Spotify playlists! Even better, ShuttlePRO v2 will detect the application that you are using and will switch configuration automatically, a real bonus if you're using multiple apps in a single project.

Highly Configurable

– Many audio-editing applications require a number of key presses or mouse clicks to allow even the most fundamental of actions, such as trimming or splitting a clip. This wastes time and often means that you can lose focus in your editing as you search through on screen menus. Using ShuttlePRO v2's 15 programmable buttons you can now apply your most regularly used tools or macros so that they are always on hand when you need them. A label sheet is also included to allow you to label the buttons as you wish!

Fast & Intuitive

– Using a mouse with one hand and ShuttlePRO v2 in the other, audio editing is made as simple as possible. Even when editing with consumer applications such as Acoustica Mixcraft, having all commonly used functions immediately to hand leads to a more professional approach and a more enjoyable experience.

Software Features

- Pre-configured for dozens of applications - Mac and Windows
- Monitors the application you are in and automatically switches settings
